## AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

## Listing of Claims:

1 - 22. (Cancelled)

23. (Currently Amended) A method in a client-server computer network for reorganizing storage and accessing the reorganized storage such that clients in the network may access stored data, after the data has been moved to a new location, by using the original path name of the original location of the data, the method comprising:

relocating a legacy share from a legacy server to a new server;

copying contents of the legacy share to the new server, the contents comprising all data of the legacy share stored upon the legacy server;

copying permissions of the legacy share to the new server;

creating an alias for the legacy server name such that the unchanged legacy server name resolves to a network address of a consolidation server;

creating a legacy server root associated with the legacy server name on the consolidation server:

creating a link on the legacy server root corresponding to the legacy share on the new server:

resolving the legacy server name that is aliased to the consolidation server;

receiving at the consolidation server a request from a client for the legacy share, the request specifying the original, unchanged legacy share path name;

logging information about the request, the information comprising a name of the legacy share and a name of a client making the request;

tracking active usage of the legacy share through the logged information;

based upon the logged information and the tracked active usage, determining when the legacy share should be retired based upon infrequent usage;

Application No. 10/772,533 Amendment "E" dated November 17, 2009 Reply to Non-Final Office Action mailed August 17, 2009

the consolidation server rewriting the legacy share path name by prepending the legacy share path with the consolidation server name:

the consolidation server traversing the rewritten legacy share path name and resolving links within the rewritten legacy share path name; and

the consolidation server responding to the client request with the share path name of the storage location of the relocated legacy share.

- (Previously Presented) The method of claim 23 further comprising resolving the aliased legacy server name to establish a connection to the network address of a server.
- 25. (Previously Presented) The method of claim 23 further comprising sending an access request to the new server for the legacy share path name.
- (Previously Presented) The method of claim 23 wherein the consolidation server and the new server are the same server.
- (Original) The method of claim 23 wherein rewriting the legacy share path comprises invoking a path rewriter to rewrite the legacy share path.
- 28. (Original) The method of claim 23 further comprising encountering a link while traversing the rewritten legacy share path.
- 29. (Original) The method of claim 23 wherein resolving any links in the rewritten legacy share path comprises invoking a path redirector to resolve any links in the rewritten legacy share path.
- (Original) The method of claim 23 further comprising accessing the share path of the storage location of the relocated legacy share.

Application No. 10/772,533 Amendment "E" dated November 17, 2009 Reply to Non-Final Office Action mailed August 17, 2009

- 31. (Original) The method of claim 30 wherein accessing the share path of the storage location of the relocated legacy share comprises sending a Dfs create request to the network address of the storage location of the relocated legacy share.
- 32. (Original) The method of claim 30 wherein accessing the share path of the storage location of the relocated legacy share comprises accessing a path of a separate Dfs namespace.
- (Original) The method of claim 23 further comprising encountering a Dfs reparse point while traversing the rewritten legacy share path.
- 34. (Original) The method of claim 33 further comprising returning a message to the client indicating the path contains a link.
- (Original) The method of claim 34 further comprising receiving a referral request message from the client for the referral path.
- (Previously Presented) A computer readable storage medium having encoded thereon computer-executable instructions for performing the method of claim 23.
  - 37 40. (Cancelled)
